

Gabriel Williams

Rochester, NY

gabrielhwilliams@gmail.com | github.com/gabrielhwilliams | linkedin.com/in/gabriel-h-williams/

Skills

- **Programming Languages:** Python, Java, C/C++, SQL, React.ts/js, C#
- **Skills:** Git, CI/CD, Relational Databases, Software Architecture, Containerization, Cloud Services, Docker, AGILE, Debugging, TensorFlow, NLP, and Professional Communication
- **Bilingual:** English/French

Education

Bachelor of Science: Software Engineering, Psychology

Expected May 2027

Rochester Institute of Technology, Rochester, NY (Ongoing)

- 3.9 GPA, Dean's List

Experience

RKF Engineering Solutions, Remote

May 2025 - December 2025

Software Engineering Co-op

- Worked on a large web application with many sub-groups mainly using Angular and Java
- Transitioned to a variety of subsystems to learn, enhance and debug depending on need
- Implemented pipelines to build, test, and deploy a variety of services in Kubernetes and Docker

Amplify Education, Remote

May 2024 - December 2024

Software Engineering Co-op

- Full stack development including React.ts front-end, RESTful Java backend and an SQL database as well as small stories on a range of other company services
- Designed and built internal UI from scratch to allow for easy access to the database
- Refactored SQL to implement multiple versions of objects and create active/read-only versions
- Implemented 50+ unit and integration tests and automated testing as part of the git workflow

Amplify Education, New York City, NY

June 2022 - August 2022

Software Engineering Intern

- Using n-grams, trained a model to find and prune chunks of gibberish text in Python & R
- As a team of 3, analyzed and presented solutions to a proposed internal problem and implemented designed system for use
- Reviewed and optimized solution after initial implementation

Projects & Publications

Goobers Hackathon

November 2025

- Hardware Project to create a digital pet system where they are linked with a fingerprint
- Created by combining esp32 boards, a digital screen, fingerprint reader and a hosted webserver
- Built using C++, Python, SQL and Docker

Recipeasy Project

February 2025

- Full stack application I designed and built to implement what I had learned professionally and academically. The goal was to make a website to store my favourite recipes.
- Built with a Java backend (Spring) with an SQL database and a React front-end, connected by a RESTful API
- Includes database migrations with Liquibase and containerization through Docker.
